Color

Brand primitives

brand-navy

#07223C · rgb(7, 34, 60)

Primary brand color. Headings, icon fill, primary text.

brand-teal

#56C3BA · rgb(86, 195, 186)

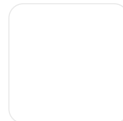

Accent, gradient start.

brand-sky

#59C9F4 · rgb(89, 201, 244)

Accent, gradient end.

brand-white

#FFFFFF · rgb(255, 255, 255)

Text

text-heading

#07223C · rgb(7, 34, 60)

Headings, nav active state

text-body

#1C3550 · rgb(28, 53, 80)

Default body copy

text-secondary

#3E5871 · rgb(62, 88, 113)

Muted/secondary copy, inactive nav

text-inverse

#FFFFFF · rgb(255, 255, 255)

Text on dark surfaces

text-inverse-muted

#CDE9F4 · rgb(205, 233, 244)

Secondary text on dark surfaces

text-link

#07417A · rgb(7, 65, 122)

Default link color

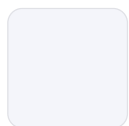

text-link-hover

#07223C · rgb(7, 34, 60)

Link hover state

Surfaces

surface-page

#F4F5FA · rgb(244, 245, 250)

Default page background

surface-card

#FFFFFF · rgb(255, 255, 255)

Cards, header, content panels

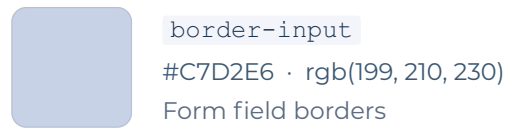

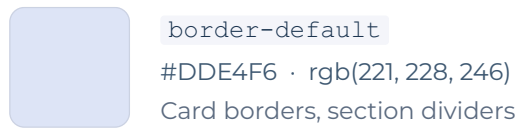

surface-hero

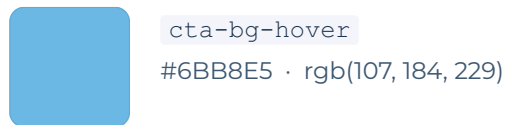

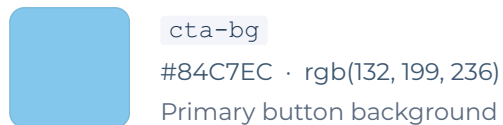

#082848 · rgb(8, 40, 72)

Dark hero/feature section background

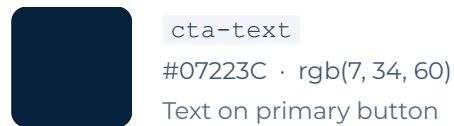

Borders & dividers

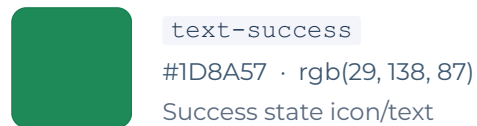

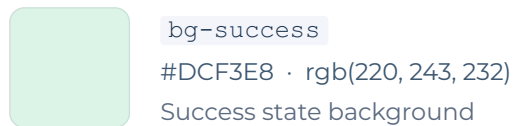

Interactive (buttons)

Primary button hover

Status

Step-progress scale

A 3-stop scale for sequential step indicators (e.g. step 1 of 3 in a process).

When a step indicator uses this scale on a graphic element (icon, circle, bar), any label text for that same step must use the matching `step-N` token — never a different color for the label than for its graphic.

Typography

Typeface

Montserrat, all weights. Fallback stack, for the moment before Montserrat loads:

```
'Montserrat', -apple-system, 'Segoe UI', Helvetica, Arial, sans-serif
```

Weights

Three weights cover the system. Don't reach outside this set without a specific reason.

Aa Bb Cc

400 · Regular — Body copy, paragraphs

Aa Bb Cc

600 · SemiBold — Subheads, nav, buttons, UI labels

Aa Bb Cc

700 · Bold — Headings, eyebrow/label text

Medium (500) and Light (300) are available if a specific composition needs them, but aren't part of the standard set.

Type scale

H1 · 48PX · 700 · LINE-HEIGHT 1.15

Evidence Notification System

H2 · 32PX · 700 · LINE-HEIGHT 1.2

From forensic hit to investigative action

H3 · 22PX · 600 · LINE-HEIGHT 1.3

Notify. Update. Escalate.

H4 · 18PX · 600 · LINE-HEIGHT 1.3

Investigation accelerator

EYEBROW / LABEL · 13PX · 700 · 0.06EM TRACKING · UPPERCASE

NOTIFY. UPDATE. ESCALATE.

BODY LARGE · 18PX · 400 · LINE-HEIGHT 1.6

Forensic Tracker notifies investigators the moment a forensic hit lands.

BODY · 16PX · 400 · LINE-HEIGHT 1.65

Every update is logged in the case console, from lab bench to documented response.

SMALL / CAPTION · 13PX · 400 · LINE-HEIGHT 1.4

Article image caption or metadata text.

NAV LINK · 14PX · 600

Product

BUTTON · 15PX · 600

Get a demo

Don't

- Don't use a weight outside 400/600/700 without a specific reason.
- Don't set body text below 13px.
- Don't set headings or body copy in uppercase — reserve uppercase for eyebrow/label text and buttons only.
- Don't artificially stretch, condense, skew (fake italic), or bold (text-shadow stacking) the typeface.
- Don't substitute another typeface, even temporarily.

Logo usage

Asset inventory

Never redraw, retrace, or reconstruct the logo from an image — always place one of these files as-is.

color-Logo-dark
text.svg
Default lockup, on white/
light backgrounds

color-Logo-white
text.svg
On the brand-navy hero or
an equally dark background

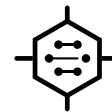

Logo Black.svg
Single-color, light
backgrounds: print,
watermarks, faxes

Logo White.svg
Single-color, dark
backgrounds

icon color.svg
Icon only, full color: app
icon, social avatar, large
favicon

icon black.svg
Icon only, light
backgrounds, single color

icon white.svg
Icon only, dark
backgrounds, single color

Never use the full lockup's gradient version (`color-Logo-*`) on a background other than white/near-white or the brand-navy hero — the teal-to-sky gradient loses contrast against anything else. Use `Logo Black.svg` / `Logo White.svg` for any background where contrast is uncertain.

Clear space

Standalone placements (title slides, letterhead, printed materials, an app-icon tile, a hero section where the logo is the graphic) — minimum clear space on every side is **10% of the icon mark's rendered height**, measured from the icon's outermost stems. No text, edge, or other graphic may enter that margin.

Embedded UI placements (nav bar, table header, favicon, card header) — no computed minimum. Follow the surrounding layout's normal spacing; the only hard rule is that no other element may overlap or directly touch the logo.

Minimum size

ASSET	ABSOLUTE FLOOR	RECOMMENDED MINIMUM
Icon only (header, app icon, avatar, anywhere legibility matters)	24px — motif barely reads	32px — motif reads clearly
Full lockup	24px tall / ~100px wide	32–40px tall

Below the absolute floor, don't place the logo at all — it stops being recognizable as the mark rather than just getting smaller.

Favicon

Favicons are exempt from the icon-only minimum above — silhouette-only rendering at small sizes is expected and normal there. Export from `icon_color.svg` at each size rather than picking one:

SIZE	SURFACE
16×16	Browser tab, bookmarks bar (baseline, universal support)
32×32	HiDPI tabs, Windows taskbar
180×180	iOS home-screen icon (apple-touch-icon)
192×192, 512×512	Android / PWA icons

Don't

- Don't recolor the logo outside the files above — no custom tints, no matching it to a page's accent color.
- Don't stretch, skew, or scale the icon and wordmark by different factors — scale the whole lockup uniformly.
- Don't rotate the logo.
- Don't add drop shadows, glows, outlines, or other effects.
- Don't place the gradient color version on a background that isn't white/near-white or the brand-navy hero.
- Don't crop the lockup — if space is tight, switch to the icon-only mark instead.
